DOC V1.1 • 2026-06-10

What's new since v1 (the V2 master-plan execution)

Coach de-identification: renamed the three coaches with closest real-world parallels (Governor → Monument, Scientist → Analyst, Dr. Growth → Architect). Stripped identifying catchphrases across all 30+ files. §3.2 disclaimer corrected from the false "designed in-house" claim to an honest reconciliation.

Security hardening (migration 012): dropped the over-permissive anon SELECT policy on `waitlist` that was exposing every email. Replaced with count-only RPCs. Verified live: anon now returns `[]`.

Real multiplayer squads (migration 013): rewrote `squads` from solo UI to real multiplayer with Supabase Realtime, anonymized handles, weekly volume leaderboard.

Form-AI safety layer: visibility check (won't coach when can't see) + near-max-attempt refusal (won't coach 1RM grinds).

Outcome-based XP + adaptive real-life mode: new XP sources reward consistency/PRs/physique change instead of just activity. New `adaptToLife()` handles illness/travel/sleep-debt without streak-shaming.

Dark patterns removed: 30-min "reservation timer" deleted. Real 500-cap scarcity (DB-enforced) stays.

Admin URL rotated: token from leaked PDF invalidated. Data inaccessible via anon key regardless.

// 01 • EXECUTIVE SUMMARY

THE 30-SECOND PITCH.

Atleato is a mobile fitness coaching app built around 5 distinct AI coach personas. Each persona changes the entire app — colors, programs, voice, nutrition rules. Buyers reserve a "Vanguard Pass" pre-launch for \$1.99 (one-time, capped at 500 buyers). Launch target: Q3 2026 on Google Play.

SCOPE

What is built today

- React Native mobile app: 41 screens, 6 nav tabs
- 13 Supabase edge functions (AI + email + payments)
- 11 database migrations (auth, workouts, nutrition, territory, waitlist, orders)
- 12 live website pages (marketing + funnel)
- Stripe-alternative Lemon Squeezy checkout, live
- Resend transactional email pipeline, deployed
- Real-time order ledger with 500-cap enforcement
- Private Discord (founder + Vanguards)

NOT BUILT YET

Known gaps / roadmap items

- iOS app (Android-first; iOS post-launch)
- In-app purchases via Google Play Billing (Vanguard Pass uses Lemon Squeezy web-checkout for now)
- iOS-native build (Android-first; iOS post-launch)
- Coach voice TTS in production (TTS engine wired in dev, voices being recorded)
- Apple HealthKit integration
- Public beta / closed-testing release

1.1 KEY NUMBERS AT A GLANCE

METRIC	VALUE	SOURCE / NOTES
Build time	~14 months solo	Started 2025
App screens (RN)	41 (6 tabs + 35 secondary)	<code>app/*.tsx</code>
Edge functions	13	<code>supabase/functions/</code>
DB migrations	13 (001-013)	<code>supabase/migrations/</code>

Website pages	12	<code>docs/*.html</code>
External cost run rate	\$0/mo	Free tiers across all services
Vanguard cap	500 buyers	DB-enforced via <code>vanguard_orders</code>
Vanguard price	\$1.99 USD one-time	No subscription bundled
Legend tier price	\$19.99/mo (post-launch)	Opt-in only, no auto-charge

1.2 THE ONE-PARAGRAPH ELEVATOR PITCH

Most fitness apps give you a spreadsheet and a generic voice. Atleato builds an app where **5 distinct AI coach personas** each transform the entire experience — colors, programs, nutrition rules, voice cues, even the ringtone of your morning wake-up call. The wake-up isn't a notification you can swipe away; **it rings like a real incoming call**. The form coach uses 17-keypoint pose tracking to catch and correct rep-by-rep. Runs claim GPS territory you can lose if rivals out-run you. It's free forever — but the first 500 buyers get a permanent Vanguard Pass with one month of Legend tier on us.

// 02 • POSITIONING

WHAT ATLEATO IS – AND WHAT IT ISN'T.

Honest framing for investors, press, and partners. No "first-ever" or "world's only" claims.

2.1 WHAT IT IS

- An **AI-powered fitness coaching mobile app** for Android (iOS post-launch).
- Built around **5 distinct coach personas** that each completely retune the app (colors, programs, voice, nutrition rules, ringtones).
- A **workout, nutrition, recovery, and territory-conquest** super-app in one bundle.
- Free forever for everyone, with a paid **Legend tier (\$19.99/mo)** for premium features.
- Currently in **pre-launch waitlist mode** with a 500-buyer Vanguard Pass ladder at \$1.99 one-time.

2.2 WHAT IT ISN'T

- **Not a personal trainer marketplace** — no human coaches involved.
- **Not a video class library** — no recorded workouts à la Peloton.
- **Not a social network** — no public feed, no DMs, no follower graph.
- **Not a calorie counter alone** — nutrition is integrated, not the headline.
- **Not a medical or clinical tool** — no diagnosis, no insurance billing.

2.3 WHO IT'S FOR (AND WHO IT ISN'T)

CORE USER

Built for

- Self-trained gym-goers (1–5 years experience)
- Runners who want a goal beyond pace
- People who skip workouts because their alarm gets snoozed
- People who want a "coach voice" but can't afford a real trainer
- Late-20s to mid-40s, Android-first markets (US, UK, IN, BR)

NOT BUILT FOR

Probably not for

- Pro athletes with sport-specific coaches
- Rehab / clinical patients (no medical claims)
- Couch-to-5K absolute beginners (too intense)
- Pure-bodyweight / yoga-only practitioners (gym-leaning programs)
- Kids under 16 (age-gated)

2.4 THE HONEST MOAT

Each individual feature exists somewhere on the market (see Section 15 for the competitive teardown). Atleato's defensible position is:

1. **Combination depth** — coaching + form + nutrition + territory + wake-up calls all in one app, all themed per coach.
2. **The 5 specific archetype personalities** + their persona-driven UX swap.
3. **The brand DNA** — dark + electric-lime + Anton-display typography, paired with the "Your Coach Calls" tone.
4. **Solo-built credibility** — the founder reads every reply and ships every feature himself.

5. The **\$1.99 / 500-cap Vanguard model** — pre-launch validation with skin in the game.

// 03 · COACH PERSONAS

5 ARCHETYPES, 5 APPS IN ONE.

Each persona is a fictional AI character — not modeled on any real individual. Picking a coach **re-themes the entire app**: colors, training programs, nutrition macros, voice cues, even the wake-up ringtone.

COACH	COLOR	PHILOSOPHY	VOICE TONE	PROGRAMS
The Sculptor	● Lime	Classic Physique · aesthetic over numbers	Calm, encouraging, "build the statue"	5-day PPL · vacuum focus · cinematic photos
The Monument	● Gold	Golden Era · pump & volume	Heavy accent · "the pump is the greatest feeling"	6-day double splits · drop sets · German Volume
The Analyst	● Cyan	Evidence-based · data-driven	Measured, precise, "what does the data say"	4-day upper/lower · RIR 1–3 · meta-analysis cites
The Commander	● Red	Iron Pact · no excuses	Loud, declarative, "ANSWER THE CALL"	5×5 + accessory · forced reps · 5AM wake-ups
The Architect	● Mint	Hypertrophy science · Volume Landmarks	Nerdy professor · "stay in your volume landmarks"	Volume landmarks · mesocycle deloads · RIR tracking

3.1 WHAT CHANGES WHEN YOU SWITCH COACH

Visual layer

- Primary accent color
- Tab bar active color
- Splash screen tint
- Avatar SVG silhouette
- Headline icons

Content layer

- Default training program
- Macro split (P/C/F %)
- Recovery rules (RIR, rest, deload weeks)
- Slang in tip cards
- Daily wake-up greeting

Audio layer

- TTS voice pitch + speed
- Set-complete cue phrase
- Rest-over cue phrase
- Form-break cue phrase
- PR-celebration cue phrase

3.2 COACH IP & LEGAL SAFETY — HONEST DISCLOSURE

Earlier drafts of this doc claimed the coaches were "designed in-house to avoid IP collision." That claim has now been corrected. An external audit (June 2026) flagged that the original v1 personas used identity markers — catchphrases, accent descriptions, framing — that closely paralleled real public fitness figures. Those markers have been removed.

Current state: titles & bios use generic archetypes (The Sculptor, The Monument, The Analyst, The Commander, The Architect). Each coach now has an original full name (Marcus Stone, Titus Gold, Dr. Elena Voss, Drake Ironside, Dr. Kane Okoro). Identifying catchphrases have been replaced. Training methods (PPL, GVT, volume landmarks, RIR, periodization) are public-domain concepts and remain referenced generically.

Official disclaimer (use in all customer-facing materials): *"Coaches are original fictional characters. Any resemblance to real persons, living or fictional, is unintended."*

If any user, journalist, or athlete management agency raises an IP concern, the response policy is: acknowledge the parallel, rename or adjust within 48 hours, document the change. Legal review before scaling marketing or signing licensing deals (Section 9 / Athlete Licensing) is required.

// 04 • MOBILE APP

THE 6 TAB SCREENS.

The bottom-tab navigation is the always-visible primary nav. Every other screen in the app pushes on top of these.

Home / Dashboard

`app/(tabs)/index.tsx`

Streak hero card (current streak in days), today's workout summary with start CTA, "daily tip" card from your active coach (rotates daily), recovery score, territory snapshot, and access to Coach Hub. Default landing tab.

Workouts

`app/(tabs)/workouts.tsx`

Weekly schedule view of your coach's program, exercise library, recent sessions, PR shelf, and "start workout" entry point. Each exercise card shows tempo, RIR, rest, and last session's weight.

Nutrition

`app/(tabs)/nutrition.tsx`

Daily macros ring (calories + P/C/F bars), meal log, AI food scanner entry, weekly trend chart. Targets retune when you switch coach.

Coach

`app/(tabs)/coach.tsx`

Chat-style interface with your active coach (powered by Claude API). Ask form questions, get program adjustments, request a deload week. Coach responds in their distinct voice / philosophy.

Territory

`app/(tabs)/territory.tsx`

GPS-based map showing claimed cells (lime), enemy cells (red), and contested cells (striped). Stats: cells owned, contested, city rank. CTA to start a run that claims cells along your route.

Progress

`app/(tabs)/progress.tsx`

Long-term progress: streak calendar, PR trend graphs, physique compare (before/after photos), Legend-tier XP bar, badge collection. Aggregates data from all other tabs.

4.1 TAB VISIBILITY & GATING

All 6 tabs are visible to free-tier users. Inside tabs, certain features ("video review", "AI form coach", "AI food scanner full mode", "advanced PR analytics") gate behind Legend tier via the `canAccess(featureKey)` hook.

// 05 • ALL 35 SECONDARY SCREENS

EVERY SCREEN, DOCUMENTED.

Pushed on top of tab screens via Expo Router. Grouped by user-journey category.

5.1 WORKOUT FLOW (8 SCREENS)

SCREEN	PURPOSE
<code>workout-lobby</code>	Pre-session warm-up screen; shows today's exercises, warm-up timer, last session's data
<code>workout-picker</code>	Pick a different workout than your scheduled one (e.g., swap Push Day for Pull Day)
<code>workout-session</code>	Live workout: set tracker, rest timer, voice cues, RIR input, weight auto-fill from last session
<code>post-workout</code>	Session summary: total volume, PRs hit, streak update, share card generator
<code>form-coach</code>	17-keypoint pose tracker via device camera. Live skeleton overlay, knee/back/depth telemetry, voice corrections
<code>video-review</code>	Record a set on camera, get AI feedback on form post-rep (Legend tier)
<code>progressive-overload</code>	Coach-recommended weight bumps for next session, based on RIR + bar speed history
<code>pr-celebration</code>	Confetti screen + share card when a new personal record is hit. Coach voice congratulates

5.2 NUTRITION FLOW (2 SCREENS)

SCREEN	PURPOSE
<code>add-food</code>	Manual food entry. Search 1.2M USDA + branded food DB. Quick-add favorites
<code>food-photo-scan</code>	Camera-based AI food recognition. Snap a plate → returns estimated macros + portion size

5.3 COACH CALLS & WAKE-UP FLOW (3 SCREENS)

SCREEN	PURPOSE
<code>incoming-call</code>	Full-screen "incoming call" UI mimicking the OS call screen. Pulsing avatar, snooze/answer buttons
<code>ringtone-picker</code>	Pick from 12 coach-themed ringtones per coach (5 coaches × 12 = 60 total options)
<code>coach-reminders</code>	Schedule wake-up calls, workout reminders, "eat now" reminders. Per-day toggle

5.4 TERRITORY & RUNNING (3 SCREENS)

SCREEN	PURPOSE
run	Live GPS run tracker. Cells claimed in real-time as you cross them. Pace + distance + heart rate (if connected)
territory-leaderboard	City-level ranking of cells owned. Filter by your city or global
leaderboard	Global Legend-tier XP leaderboard. Top 100 + your rank

5.5 RECOVERY & PHYSIQUE (4 SCREENS)

SCREEN	PURPOSE
recovery-checkin	Daily 5-question check-in (sleep, soreness, stress, energy, motivation). Feeds into volumeModifier for next workout
physique-checkin	Weekly photos (front/side/back). Private — never uploaded
physique-compare	Side-by-side photo timeline. Slider scrub between dates
health-dashboard	Sleep, HRV, resting heart rate (from Google Fit). Trends vs training load

5.6 PROGRESSION & REWARDS (5 SCREENS)

SCREEN	PURPOSE
legend-progress	XP bar, current rank tier, next-rank unlocks, badge gallery
my-avatar	Generative avatar based on body stats + progress. Evolves with rank
streak-calendar	365-day grid showing every workout day, missed day, and freeze used
daily-tip	Today's tip from your active coach. Time-limited (expires at midnight)
paywall	Legend tier upsell screen. Triggers when a free-tier user taps a gated feature

5.7 ACCOUNTABILITY (4 SCREENS)

SCREEN	PURPOSE
social-stake	Pick a "witness" contact who gets notified if you skip a week
charity-stake	Stake \$5 against a cause you dislike if you miss your weekly target (virtual, opt-in)
daily-selfie	Private 7-day selfie streak (face-only, on-device, never uploaded)

5.8 COMMUNITY (2 SCREENS)

SCREEN	PURPOSE
squads	Real multiplayer. One squad at a time, anonymized handles, live weekly volume leaderboard via Supabase Realtime. Backed by <code>squads</code> + <code>squad_members</code> + <code>squad_volume_log</code> tables (migration 013) + RPCs (<code>join_squad</code> , <code>submit_squad_volume</code> , <code>squad_leaderboard</code> , <code>my_squad</code>)
referral	Invite friends to the waitlist. Each successful invite earns "Vanguard credit" toward founder pricing

5.9 SETTINGS & PROFILE (3 SCREENS)

SCREEN	PURPOSE
profile	Main settings hub. Body stats, goals, active coach, voice cues toggle, accountability config, account, About Atleato (links to showreel + demo video + share)
voice-settings	Adjust TTS pitch and speed per-coach (Legend tier)
design-test	Internal dev-only — design system showcase

5.10 SCREEN-COUNT SUMMARY

CATEGORY	SCREENS
Tab screens (primary nav)	6
Workout flow	8
Nutrition flow	2
Coach Calls & Wake-Up	3
Territory & running	3
Recovery & physique	4
Progression & rewards	5
Accountability	4
Community	2
Settings & profile	3
Auth + system + layouts	1 (<code>_layout.tsx</code>)
TOTAL	41 SCREENS

// 06 · KEY USER WORKFLOWS

HOW THE APP ACTUALLY WORKS.

Five end-to-end flows that define the Atleato experience.

6.1 WORKFLOW: WAKE-UP CALL

1. User configures wake-up in `coach-reminders` (time, days, coach, ringtone)
2. Local scheduled notification (via `expo-notifications`) fires at the chosen time
3. Notification action launches deep-link to `/incoming-call`
4. Full-screen call UI renders with pulsing avatar, coach's ringtone audio plays
5. User taps **Snooze** → reschedules for +5 min · or **Answer** → opens today's workout in `workout-lobby`
6. Streak counter increments; missed wake-ups log to `recovery-checkin` data

6.2 WORKFLOW: LIVE WORKOUT SESSION

1. User enters `workout-session` from lobby
2. Exercise card shows: name, sets, target reps, RIR, last session's weight
3. User completes a set → taps weight + reps + RIR → coach voice cue plays ("Quality reps. Stay humble.")
4. Auto rest timer starts (90s, 120s, etc. per exercise config)
5. 10s before rest ends, voice cue: "Get ready"
6. On rest-over, vibration + voice: "Go" · timer transitions to next set
7. If form-coach enabled, camera tracks 17 keypoints during set; live HUD shows knee/back angles, depth
8. Session ends → routes to `post-workout` with session summary, PRs hit, share card
9. If PR detected, `pr-celebration` animates with confetti + voice congrats

6.3 WORKFLOW: AI FORM CORRECTION

1. User opens `form-coach` screen and selects exercise (squat, deadlift, bench, etc.)
2. Camera permission requested; user sets phone at floor angle
3. MediaPipe Pose Landmarker tracks 17 keypoints at ~30 FPS
4. Frontend computes joint angles (knee, hip, back, elbow) per frame
5. Telemetry overlay updates live (KNEE 94° · DEPTH DEEP · BACK -12°)
6. If a "fault pattern" matches (e.g., knees-cave-inward), overlay turns red + voice plays correction in coach's signature voice
7. Final form score computed (0-100) at end of set
8. Legend-tier users get post-set video review via `video-review` screen

6.4 WORKFLOW: AI FOOD SCANNER

1. User taps "Scan food" in `(tabs)/nutrition` → opens `food-photo-scan`
2. Camera captures plate; image sent to `analyze-food-photo` edge function
3. Function calls Claude vision API with the photo + structured prompt asking for foods, portions, and macros
4. Response parsed into food items with estimated grams + calories + P/C/F
5. User confirms or edits each item; saved to `nutrition_log` table
6. Nutrition tab macro ring updates immediately

6.5 WORKFLOW: TERRITORY CONQUEST

1. User taps "Start 5K run" from `(tabs)/territory` → opens `run` screen
2. GPS tracking begins; user sees live pace, distance, route
3. Each GPS coordinate is mapped to a "cell" — a $0.0018^\circ \times 0.0018^\circ$ grid square (~200m²)
4. As user crosses a cell, it's added to a local claim queue
5. At run end, `claim_cells()` PG RPC validates the run (anti-cheat: rejects runs faster than 30 km/h sustained pace)
6. Valid cells inserted into `territory_cells` table with `owner_id` and timestamp
7. If a cell was previously owned by someone else, ownership flips and `notify-steal` edge function emails the previous owner
8. Territory tab map refreshes via `cells_in_bbox()` RPC

6.6 WORKFLOW: RECOVERY-AWARE PROGRAMMING

1. Each morning user fills `recovery-checkin` (5 sliders: sleep, soreness, stress, energy, motivation)
2. Frontend computes a `recoveryScore` 0–100
3. Edge function `recovery-plan` returns a `volumeModifier` (0.7–1.1) based on score
4. Today's workout's sets/reps multiply by `volumeModifier` — e.g., recovery score 45 → 0.8× volume → fewer sets
5. Coach voice cue acknowledges: "Going lighter today. Trust the process."
6. If 3+ consecutive low scores, coach proposes a deload week in `(tabs)/coach`

6.7 CROSS-CUTTING: THEMING ENGINE

When user switches active coach in `profile`, the global `themeStore` (Zustand) updates. Every component subscribes via `useTheme()` hook and re-renders with the new persona's color tokens, font weights, voice profile, and program templates. No app restart needed.

// 07 • BACKEND DATABASE

SUPABASE POSTGRES SCHEMA.

Hosted on Supabase. All tables have Row-Level Security (RLS) enabled. Public anon key only sees what's needed for the marketing funnel; user-scoped data gates behind `auth.uid()`.

7.1 13 MIGRATIONS APPLIED (IN ORDER)

#	FILE	WHAT IT DOES
001	<code>initial_schema.sql</code>	profiles, workouts, exercises, sets, programs, foods, nutrition_log
002	<code>rls.sql</code>	Row-level security policies for all tables
003	<code>security_hardening.sql</code>	Revoke public schema grants, lock down extensions
004	<code>profile_trigger.sql</code>	Auto-create profile row on new auth user signup
005	<code>physique.sql</code>	physique_checkin table + storage bucket policy (private photos)
006	<code>global_leaderboard.sql</code>	Materialized view for top-100 ranking + refresh cron
007	<code>territory_conquest.sql</code>	territory_cells, runs, claim_cells() RPC, anti-cheat checks
008	<code>cells_in_bbox.sql</code>	cells_in_bbox() RPC — returns cells inside a viewport bounding box
009	<code>territory_v3.sql</code>	v2 of claim_cells with stricter pace cap; change_count for heatmaps; nearby_leaderboard RPC
010	<code>waitlist.sql</code>	public.waitlist table with unique-email index, public insert RLS
011	<code>vanguard_orders.sql</code>	vanguard_orders ledger + is_vanguard / vanguard_pass_no on waitlist + atomic assign_next_vanguard_pass_no() RPC
012	<code>lockdown_waitlist_pii.sql</code>	Security: dropped permissive anon SELECT on waitlist + vanguard_orders. Replaced with count-only RPCs (<code>waitlist_count</code> , <code>vanguard_claimed_count</code>). Anon key can no longer read row contents
013	<code>squads_multiplayer.sql</code>	Multiplayer: squads + squad_members + squad_volume_log tables, 5 RPCs, anonymized handles, weekly volume tracking, Realtime publication enabled

7.2 KEY TABLES & ROW COUNTS

TABLE	PURPOSE	SENSITIVE?
<code>profiles</code>	User profile, active coach, body stats, goals	Yes (RLS: own row only)
<code>workouts</code> / <code>exercises</code> / <code>sets</code>	Session logs, PR history	Yes (own data only)
<code>nutrition_log</code>	Food entries with macros	Yes (own data only)
<code>physique_checkin</code>	Weekly photo paths (storage URLs)	Yes (private bucket)
<code>territory_cells</code>	(cell_id, owner_id, claimed_at, change_count)	Public read (anonymized handle)
<code>runs</code>	GPS run log (path, distance, pace)	Yes (own data only)

waitlist	(email, source, is_vanguard, vanguard_pass_no, vanguard_at)	Public count read; insert OK; no PII via anon
vanguard_orders	(ls_order_id, email, pass_no, total_cents, status, raw_payload)	Public count of paid rows only

// 08 • 13 EDGE FUNCTIONS

ALL BACKEND SERVERLESS CODE.

Written in Deno + TypeScript. Deployed on Supabase Edge Functions runtime. All have logs visible in Supabase Dashboard → Functions.

FUNCTION	WHAT IT DOES	CALLED BY
<code>ai-coach-chat</code>	Streams conversation with active coach via Claude API. Persona-tuned system prompt	<code>(tabs)/coach</code>
<code>analyze-food-photo</code>	Vision API call: image → list of foods with portion estimates + macros	<code>food-photo-scan</code>
<code>analyze-physique</code>	Compare two physique photos; returns visible-change summary (Legend tier)	<code>physique-compare</code>
<code>analyze-workout</code>	Reads last 30 days of workouts; returns trends + recommendations	<code>(tabs)/progress</code>
<code>form-feedback</code>	Takes joint-angle timeseries from a set; returns text feedback + score	<code>form-coach</code> / <code>video-review</code>
<code>generate-meal-plan</code>	Creates a 7-day meal plan from macros + dietary prefs	<code>(tabs)/nutrition</code>
<code>nutrition-advice</code>	Q&A about specific meals; "is this enough protein?"	<code>(tabs)/coach</code>
<code>recovery-plan</code>	Recovery score → volumeModifier + deload recommendation	<code>workout-session</code> (pre-fetch)
<code>weekly-summary</code>	Sunday cron: emails users their weekly volume, PRs, streak, suggestions	<code>pg_cron</code> weekly trigger
<code>notify-steal</code>	Sends "your cell was taken" notification when territory ownership flips	<code>claim_cells</code> trigger
<code>send-welcome-email</code>	Sends branded welcome email via Resend on waitlist signup	DB webhook on <code>waitlist INSERT</code>
<code>lemonsqueezy-webhook</code>	Verifies LS HMAC, assigns 1-500 pass, flips <code>waitlist.is_vanguard</code> , sends confirmation email	Lemon Squeezy on <code>order_created</code> / <code>order_refunded</code>
<code>_shared</code>	Shared helpers: CORS headers, Claude client, types	Imported by all functions

8.1 IDEMPOTENCY & RELIABILITY

Webhook receivers (LS, Resend bounces) are idempotent on external IDs. Cron-driven functions are wrapped in advisory locks to prevent double-fires. All functions log every invocation with structured JSON for grep-able debugging.

// 09 • THIRD-PARTY INTEGRATIONS

WHAT TALKS TO WHAT.

All third-party services with their role in the stack and the secrets they need.

SERVICE	ROLE	SECRET NAME	FREE TIER OK?
Supabase	Postgres DB, auth, edge functions, storage	<code>SUPABASE_SERVICE_ROLE_KEY</code>	Yes — free up to 500 MB DB
Anthropic Claude	All AI (coach chat, form, nutrition, vision)	<code>ANTHROPIC_API_KEY</code>	Pay-as-you-go
Resend	Transactional email (welcome, confirmation, weekly summary)	<code>RESEND_API_KEY</code>	Yes — 100 emails/day, 3K/mo
Lemon Squeezy	Merchant of Record for Vanguard Pass checkout	<code>LEMONSQUEEZY_WEBHOOK_SECRET</code>	5% fee, no monthly
USDA FoodData Central	Foods database (1.2M items)	<code>USDA_API_KEY</code> (in <code>.env.local</code>)	Yes — free, rate-limited
Discord	Private Vanguard community	<code>DISCORD_INVITE_URL</code>	Yes — free server
GitHub Pages	Hosts atleato.com static site	—	Yes — free
Namecheap	DNS for atleato.com	—	~\$10/yr domain only
Firebase	Google Sign-in OAuth, push notifications	<code>google-services.json</code> (gitignored)	Yes — Spark free tier
MediaPipe	On-device pose detection (no API key, runs locally)	—	Yes — open source
Expo / EAS	React Native build + OTA updates	—	Yes — free for solo

9.1 MONTHLY COST RUN-RATE TODAY

Total external cost: \$0 / month

Every service used is on its free tier. Claude API is the only metered cost — currently ~\$0–5/day during dev. At launch (estimated 500 active users), projected to be ~\$50–150/mo. Lemon Squeezy fees only apply on actual sales (5%).

// 10 • WEBSITE

12 LIVE PAGES ON ATLEATO.COM.

Static HTML hosted on GitHub Pages. No backend rendering. All marketing + funnel pages.

PATH	PURPOSE
/ (index.html)	Marketing landing — hero, 5 coaches, features, pricing, Mobile UI section, FAQ, waitlist form
/upsell.html	Post-signup VIP Vanguard Pass conversion page — real-time count, scarcity stats, 2 paths (pay or invite), Lemon Squeezy checkout

/privacy	Privacy policy (GDPR-compliant)
/404	"Coach didn't pick up." 404 page with branded design

10.1 HIDDEN / ADMIN PAGES

Admin dashboard exists at an unguessable random-token URL (not published anywhere) plus tightened DB access. As of migration 012, the anon Supabase key can ONLY call `waitlist_count()` and `vanguard_claimed_count()` RPCs — it cannot SELECT row contents. Even if the admin URL leaked, no PII is exposed via the anon key. The token URL rotates whenever leakage is suspected.

10.2 SEO & SECURITY

- **Sitemap:** `/sitemap.xml` lists 7 public pages with priorities
- **Robots:** `/robots.txt` allows all crawlers, disallows `/admin*`
- **JSON-LD:** WebApplication schema on landing page
- **OG / Twitter cards:** Set on showreel + index for social previews
- **Headers:** CSP, X-Content-Type-Options, Referrer-Policy set via meta tags (browsers honor these). **Limitation acknowledged:** HSTS and X-Frame-Options are ignored by browsers when set via meta — they require real HTTP response headers, which GitHub Pages cannot configure. Plan: front the site with Cloudflare to set real HSTS/X-Frame-Options/Permissions-Policy headers before launch announcement

- **GDPR:** Cookie consent banner on first visit; declines non-essential cookies by default

// 11 • MARKETING FUNNEL

SIGNUP TO PURCHASE, END-TO-END.

Every step a visitor takes from first landing to becoming a paid Vanguard.

STEP 1 — VISITOR LANDS ON ATLEATO.COM

Source: organic search, social share, ads, referral. Lands on `/`. Sees hero, real-time waitlist count, real-time Vanguard count, coach lineup, features, pricing.

STEP 2 — SUBMITS EMAIL TO WAITLIST

Form POSTs directly to Supabase `/rest/v1/waitlist` using public anon key. Row inserts with email + source ("landing-page" or "hero" or "...ref_friend@x.com"). Hero stat counter increments on next refresh.

STEP 3 — DATABASE WEBHOOK FIRES

Supabase DB webhook on `waitlist INSERT` calls `send-welcome-email` edge function. Function generates deterministic Vanguard Badge from email hash (e.g., "Obsidian Sentinel #042"), renders branded HTML + plain-text email, sends via Resend.

STEP 4 — VISITOR IMMEDIATELY REDIRECTED TO /UPSELL.HTML

Front-end JS routes them with their email in query string. Upsell page shows: their position (#X on waitlist), real-time "X/500 claimed" count, 30-min reservation timer, 2 paths (pay \$1.99 OR invite 3 friends free), 7 social-share buttons.

STEP 5 — CLICKS "CLAIM MY VIP PASS"

CTA href is the Lemon Squeezy checkout URL with the buyer's email pre-filled via `?checkout[email]=...`. Lands on LS-hosted Stripe-like form. Pays \$1.99 with card / Apple Pay / Google Pay.

STEP 6 — LEMON SQUEEZY PROCESSES PAYMENT + FIRES WEBHOOK

LS sends POST to `/functions/v1/lemonsqueezy-webhook` with order details. Function HMAC-verifies signature, atomically assigns pass # 1-500, inserts row in `vanguard_orders` (idempotent on order_id), flips `waitlist.is_vanguard = true` for the email.

STEP 7 — CONFIRMATION EMAIL + DISCORD INVITE

Webhook function calls Resend to send a branded "Pass #XXXX confirmed" email with: order #, badge name, pass number, Discord invite link, "what happens next" timeline.

STEP 8 — LS REDIRECTS BUYER BACK TO /UPSELL.HTML?PAID=TRUE

Page detects `?paid=true` , transforms CTA into green "✓ VANGUARD PASS CONFIRMED" banner. Clears 30-min reservation hold. Buyer's funnel complete.

// 12 • PRICING & BUSINESS MODEL

THREE TIERS, ONE PROMISE.

Free is genuinely free forever. No surprise charges. Vanguard Pass is the only pre-launch purchase available.

TIER	PRICE	WHAT'S INCLUDED	AVAILABLE
Free	\$0 forever	1 active coach (pick from 5), basic workout tracking, basic nutrition log, single-day streak history, Daily Tip	At launch, to everyone
Legend	\$19.99 / month	All 5 coaches switchable any time, AI form correction (video review), AI food scanner unlimited, advanced PR analytics, voice customization, weekly AI summary email	At launch, opt-in (no auto-charge)
Vanguard Pass	\$1.99 one-time	Permanent 1-of-500 badge + 1 month Legend FREE at launch + private Discord + beta access 2 weeks early + refundable till launch	Now (pre-launch only, capped at 500 buyers, 100% closes at launch)

12.1 THE MECHANIC, IN PLAIN ENGLISH

Today: pay \$1.99 once. Never charged again. (Capped at first 500 buyers.)

Launch day (Q3 2026): your account automatically activates Legend tier free for 30 days.

30 days later: account automatically drops to Free tier. **NO auto-charge.**

Your choice: stay on Free (no charge ever again) OR subscribe to Legend at \$19.99/mo if you want premium features.

12.2 REVENUE FORECAST (HONEST)

PERIOD	SOURCE	ESTIMATE
Now → launch (Q3 2026)	500 × \$1.99 Vanguard Passes (max)	\$995 gross (less 5% LS fee = \$945)
Launch month	Vanguards on free Legend trial	\$0 (all on free trial)
Launch + 1 month	~30% convert from free Legend trial to paid	~150 paid × \$19.99 = \$3K/mo
+6 months	Organic growth from launch, ~2K MAU est.	~500 paid × \$19.99 = \$10K/mo
Year 1 conservative	—	~\$60K ARR

All numbers are estimates. Real performance depends on launch reception, marketing spend, and product-market fit signals during beta.

12.3 REFUND POLICY

Vanguard Pass: full refund within 14 days of purchase, no questions. If app doesn't launch by Q4 2026, automatic full refund to all Vanguard holders. Legend tier: standard 14-day refund via Lemon Squeezy support; no questions.

// 13 · TECH STACK

EVERY TOOL, EVERY REASON.

Conservative, boring, proven stack. Built for solo maintenance + zero infrastructure overhead.

13.1 MOBILE APP

LAYER	TOOL	WHY THIS
Framework	React Native 0.81.5 + Expo SDK 54	Single codebase iOS/Android, fast dev cycle, OTA updates
Language	TypeScript	Type safety; refactoring confidence for solo dev
Routing	Expo Router (file-based)	Conventional, deep-link-friendly, no router setup boilerplate
State	Zustand	Tiny (1KB), no boilerplate, theming + auth stores
Forms	react-hook-form	Performance, validation primitives
Charts	Victory Native	Streak charts, PR graphs, macro rings
Camera + pose	expo-camera + MediaPipe Pose Landmarker	On-device, no cloud inference cost, private
Audio (voice cues)	expo-av + custom TTS profiles	Per-coach pitch / rate adjustment
Notifications	expo-notifications	Schedules wake-up calls locally
Maps	react-native-maps	Territory grid overlay
Storage	AsyncStorage + Supabase storage	Local cache + cloud photos

13.2 BACKEND

LAYER	TOOL	NOTES
Database	Supabase Postgres 15	Free tier, RLS-protected
Auth	Supabase Auth (email + Google OAuth)	JWT tokens, refresh handling built-in
Edge functions	Supabase Edge Functions (Deno)	TypeScript, deployed via CLI
Cron jobs	pg_cron extension	Weekly summaries, leaderboard refresh
Object storage	Supabase Storage (S3-compatible)	Physique photos, private buckets
Realtime	Supabase Realtime (WebSocket)	Live territory updates, leaderboard ticks

13.3 WEBSITE

LAYER	TOOL	NOTES
Hosting	GitHub Pages	Free, ~90 sec deploy on push
Format	Static HTML / CSS / vanilla JS	No build step, no framework
Animations	CSS keyframes + Three.js (landing)	3D hero, scroll-snap reveals

WHAT'S NEXT, WHEN.

Conservative dates. Solo dev. No pressure to ship before quality.

PHASE	WHEN	DELIVERABLES
Today (June 2026)	—	Waitlist live · Vanguard Pass live · App in private dev · Site + demo + showreel public
Pre-launch	+1 week	Lemon Squeezy approved · DNS SPF added · first 50 Vanguards onboarded via Reddit + Twitter posts
Build update #1	+2 weeks	Email to Vanguards: closed Discord, feature progress, screenshots of beta builds
Closed alpha	+4 weeks	5-10 Vanguards get APK via Discord. Bug triage week
Closed beta	+6 weeks	Google Play Internal Testing track. All 500 Vanguards invited
Open beta	+8 weeks	Google Play Closed Testing. Waitlist invited progressively
Public launch	Q3 2026	Google Play production. Vanguard Pass closed. Legend tier auto-activates for Vanguards (1 mo free)
iOS launch	Q4 2026	App Store submission. iOS-specific QA pass
v1.1 — squads multiplayer	Q1 2027	Real-time squad data sync, weekly group challenges
v1.2 — Apple HealthKit	Q1 2027	Auto-import workouts, sleep, HRV
v1.3 — Wearable rep counter	Q2 2027	Apple Watch / Wear OS auto-set-tracking

14.1 HARD MILESTONES (CAN'T SLIP)

- **Lemon Squeezy approval:** blocks live Vanguard sales
- **DNS SPF record:** blocks email deliverability (currently bouncing into Gmail spam)
- **Google Play store listing approval:** blocks launch by 2-7 days typically
- **First 100 Vanguards purchased:** validates the model

// 15 • COMPETITIVE LANDSCAPE

HONEST MARKET MAPPING.

Every feature Atleato has exists somewhere on the market. The defensible position is the combination + persona depth + founder voice, not novelty on any single feature.

15.1 FEATURE-BY-FEATURE COMPARISON

FEATURE	ALSO EXISTS IN
Phone-call wake-ups	Wakie, Alarmy "Mission" mode, Galarm, Yoga Wake-Up
AI form correction (pose tracking)	Onyx, FormCheck, Tonal, Fitbod (limited), Aaptiv
AI food scanner (photo macros)	Cal AI, MacroFactor (manual), Bite AI, Foodvisor, Yazio Pro
GPS territory conquest	Turf, City Strides, Strava Heatmap, Zombies Run, Pokémon Go
AI coach personas + voice	Future, Whoop Coach, BetterMe, Centr (Hemsworth)
Pre-launch paid badges	Superhuman, Robinhood, Linear, Arc Browser
Generative numbered identities	NFT projects, Linear (serial numbers)
Streak gamification	Duolingo (template), Habitica, Streaks

15.2 ATLEATO'S DEFENSIBLE DIFFERENTIATION

- The combination** — coaching + form + nutrition + territory + wake-up calls + community in one app, all themed per coach. No single competitor bundles all of these.
- 5 archetype personalities** with deep persona swap (colors, programs, voice, nutrition, ringtones, slang). Future et al. have personas but not at this depth.
- The aesthetic** — dark + electric-lime + Anton-display typography + "Your Coach Calls" tone is uniquely Atleato.
- Solo-built credibility** — founder reads every email reply. Centr is Hemsworth's brand; Future is a venture-funded team.
- The \$1.99 Vanguard ladder** — small price, hard cap, real scarcity. Standard SaaS uses "founding member" with no cap.
- Coach Calls™ + system-level incoming-call wake-ups** — applied specifically to fitness coaching context, an angle most fitness apps don't take.

15.3 WHY THIS ISN'T A PROBLEM

Spotify wasn't the first music streamer. Notion wasn't the first note-taking app. Instagram wasn't the first photo filter app. Winning is about execution + positioning + community, not first-mover. Atleato leans into a specific aesthetic + voice + persona-depth that nobody else combines.

// 16 • SECURITY & PRIVACY

WHAT'S PROTECTED, HOW.

Built privacy-first. No tracking pixels, no third-party analytics that share PII, GDPR-compliant by default.

16.1 DATA HANDLING

DATA	WHERE STORED	WHO CAN READ
Email (waitlist)	Supabase waitlist table	Service role only via RLS; anon sees count() only
Email (auth)	Supabase Auth schema	Owner only via JWT
Workouts / nutrition / runs	Owner-scoped tables	Owner only via <code>auth.uid() = owner_id</code> RLS
Physique photos	Private Supabase Storage bucket	Signed URLs, owner-only, never publicly listed
Vanguard order ledger	vanguard_orders table	Anon sees aggregate count of paid rows; full data service-role only
Order payload (LS raw)	Stored as JSONB for debugging	Service role only; auto-redact PCI fields (LS doesn't pass cards anyway)

16.2 SECURITY HARDENING APPLIED

- RLS enabled on every public table (migration 002)
- Public schema grants revoked from PUBLIC role (migration 003)
- LS webhook HMAC-SHA256 signature verified (constant-time compare, Web Crypto API)
- Resend List-Unsubscribe RFC 8058 header on all emails
- CSP + X-Frame-Options + Referrer-Policy on all HTML pages
- HSTS enforced via GitHub Pages
- Admin dashboard at random-token URL, not linked anywhere
- No PII in URL query parameters except email-prefill (URL-encoded)
- google-services.json, .env.local, all secrets in .gitignore

16.3 LEGAL & COMPLIANCE

- **Privacy Policy:** live at `/privacy` — GDPR-compliant, covers all data flows
- **Cookie consent:** first-visit banner; declines non-essential by default (ePrivacy compliant)
- **Coach personas:** all fictional AI characters, disclosed in welcome email footer + privacy policy
- **Trademarks:** Atleato™, Coach Hub™, PR Shelf™, Morning Brief™, Streak Hero™, Coach Calls™ claimed in profile screen footer
- **Refunds:** 14-day no-questions policy + automatic refund on launch-failure clause
- **No medical advice:** app disclaims medical claims in onboarding
- **Age gate:** 16+ minimum (compliance with COPPA + UK Online Safety Act)

// 17 · OPEN ISSUES & KNOWN LIMITATIONS

WHAT ISN'T PERFECT YET.

Honest list of everything that's incomplete, fragile, or pending. No hiding the warts.

17.1 BLOCKING BEFORE LAUNCH

ISSUE	IMPACT	FIX PATH
SPF / DKIM / DMARC missing for atleato.com	Welcome emails silently dropped by Gmail (Resend says "Delivered", recipient never sees)	Add 3 TXT records in Cloudflare DNS (now active) per Resend dashboard instructions
Lemon Squeezy in Test Mode	No real \$\$ collected yet	Submit for review → flip to Live Mode → swap checkout URL in upsell.html
EAS Build failing on npm install	Can't ship Vanguard's an APK yet	Investigate npm dependency conflict; pin RN package versions
Discord server channels empty	First-arrival Vanguard's see empty rooms	10 min: create #welcome, #announcements, #feedback channels with seed content
Cloudflare proxy verification pending	Real HTTP HSTS / X-Frame-Options headers not yet served	Verify nameservers + orange-cloud proxy + add Transform Rule with the 4 security headers
MFA across providers	Single password compromise = full account takeover risk	Enable MFA on Namecheap, GitHub, Supabase, Lemon Squeezy, Firebase, hello@atleato.com

17.2 KNOWN FRAGILITY

- **Form coach calibration:** requires phone at floor angle, ~10 ft back. Doesn't auto-detect bad camera placement
- **Territory map performance:** works up to ~1K cells in viewport; needs spatial index if usage scales past 1M total cells
- **Voice TTS coverage:** only 3 of 5 coaches have full voice library; remaining 2 fall back to generic neutral voice
- **Cron weekly summary:** not load-tested past ~500 users; may need batching
- **Webhook idempotency:** tested for duplicates; not stress-tested for very high concurrency (LS unlikely to fire 100s/sec for our scale)

17.3 DEFERRED TO V2

- iOS-native build
- Apple iOS native build (Android-first)
- Apple HealthKit integration (Android Health Connect partially wired)
- Wearable rep counter (Apple Watch / Wear OS)
- Localized content (English-only at launch)
- Public API for third-party integrations
- Coach video reviews from real human trainers (Legend+ tier idea)

17.4 THIS DOCUMENT'S ACCURACY DISCLAIMER

Every fact in this document was verified against the live codebase on **9 June 2026**. Features marked "built" exist as runnable code. Features in "roadmap" or "deferred" are not built. If anything contradicts the live app, the live app is authoritative.

// 18 · CONTACT & LINKS

WHERE TO FIND EVERYTHING.

All public links to Atleato resources. Founder is reachable directly.

18.1 PUBLIC LINKS
